Professional Skills Development

Anant Kumar T. K.
University of Alberta

Mission Statement

Science-oriented Engineer and Engineering-oriented Scientist. I aspire to pursue interdisciplinary research in the field of space-instrumentation to develop novel instruments to improve our understanding of various space weather phenomena.

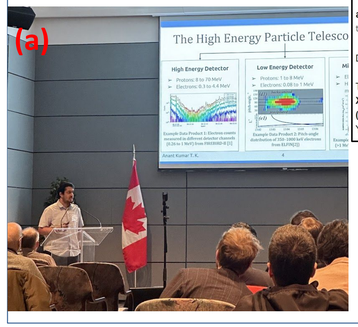

MBTI Type and Clifton Strengths

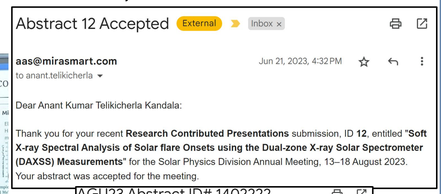

MBTI Type: Logistician (ISTJ)
Clifton Strengths:

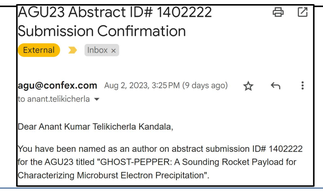

- Achiever
- Learner
- Self-Assurance
- Relator
- Activator

Learning Activity and Artifact

In order to achieve my academic goals described below, I took proactive steps to present my research as well as submit conference abstracts/journal articles. During the duration of this course, I have presented at two conferences, submitted 3 abstracts, and also co-authored a journal publication.

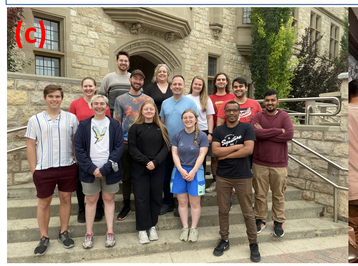

Summary

Overall, through this course I have learned how to set achievable goals in both my personal and professional life. Most importantly, I have learned how to effectively interact and work in a team with members from very different backgrounds. Overall this course has helped me develop effective communication skills to work better in a team environment.

SMART Learning Goals

Goal Number	Goal Description	Skills Domain(s)	Progress During the course
Academic-1	I would like to become proficient in the art of reading journal publications, as well as writing abstracts, conference and journal publications.	• Research and Project Management • Critical and creative thinking	I read 15-20 journal articles during the duration of this course. I can now read through a paper fairly quickly, while understanding the key points - objectives, analysis and conclusions.
Academic-2	I would like to become more confident in various aspects of my life: in my research and in my personal life. Specifically, during research presentations, lab meetings, as well as interactions with friends and colleagues.	• Interpersonal Skills • Career Development • Communication	I am trying to achieve this by proactively thinking about this during my presentations and research group discussions. During this course, I have presented work at conferences (DASP at the Canadian Space Agency) and also attended a summer school (GRIDS at TRIUMF, UBC)
Personal-1	I would like to step out of my comfort zone by trying new hobbies and meeting different people during my Masters degree.	• Intrapersonal Skills • Wellness and life balance • Intercultural competence	I have visited four different Canadian provinces so far in my Masters, (aming to visit the rest before my graduating :p). I also tried performing at an Open Mic music event in Edmonton.
Personal-2	I would like to make exercise/sports a regular part of my daily schedule/routine.	• Wellness and life balance	I have learned squash and pickleball during this year, and play regularly on campus. I have been playing football (/soccer) regularly.
